

Editorial

Marta MACIEJASZ-ŚWIĄTKIEWICZ and Bartosz FORTUŃSKI

Issues discussed in papers included in this volume of *Economic and Environmental Studies* are diverse. First article by Maria Grzelak and Elżbieta Roszko-Wójtowicz is about the use of selected methods of linear ordering to assess the innovation performance of the European Union member states. Then Barbara Fura writes about using TMAI to determine the competitive position of companies in Polish chemical industry. Afterwards Magdalena Kisała describes the influence of public-private partnership on sustainable development in local authorities in Poland. Barbara Kryk shows the social participation in local development according to the opinion of local governments and social economy entities. Małgorzata Leszczyńska, in turn, characterizes relations between incomes and expenditures on food among Polish households from regional perspective. Article prepared by Martin Lopez concerns the climate policy integration in a land use system with ecological thresholds. And finally Viktória Vásáry presents the idea of knowledge-based agriculture in Central and Eastern European Countries' bioeconomy.
